INSTRUCTION BOOKLET

PLEASE CAREFULLY READ THE SEPARATE HEALTH AND SAFETY PRECAUTIONS BOOKLET INCLUDED WITH THIS PRODUCT BEFORE USING YOUR NINTENDO[®] HARDWARE SYSTEM, GAME PAK OR ACCESSORY. THIS BOOKLET CONTAINS IMPORTANT HEALTH AND SAFETY INFORMATION.

IMPORTANT SAFETY INFORMATION: READ THE FOLLOWING WARNINGS BEFORE YOU OR YOUR CHILD PLAY VIDEO GAMES

WARNING - Seizures

- Some people (about 1 in 4000) may have seizures or blackouts triggered by light flashes or patterns, such as while watching TV or playing video games, even if they have never had a seizure before.
- Anyone who has had a seizure, loss of awareness, or other symptom linked to an epileptic condition should consult a doctor before playing a video game.
- Parents should watch when their children play video games. Stop playing and consult a doctor if you or your child have any of the following symptoms:

Convulsions
Altered vision

Eye or muscle twitching
Involuntary movements

Loss of awareness
Disorientation

To reduce the likelihood of a seizure when playing video games:

1. Sit or stand as far from the screen as possible.
2. Play video games on the smallest available television screen.
3. Do not play if you are tired or need sleep.
4. Play in a well-lit room.
5. Take a 10 to 15 minute break every hour.

WARNING - Repetitive Motion Injuries and Eyestrain

Playing video games can make your muscles, joints, skin or eyes hurt after a few hours. Follow these instructions to avoid problems such as tendinitis, carpal tunnel syndrome, skin irritation or eyestrain:

- Avoid excessive play. It is recommended that parents monitor their children for appropriate play.
- Take a 10 to 15 minute break every hour, even if you don't think you need it.
- If your hands, wrists or arms or eyes become tired or sore while playing, stop and rest them for several hours before playing again.
- If you continue to have sore hands, wrists or arms or eyes during or after play, stop playing and see a doctor.

WARNING - Battery Leakage

Leakage of battery acid can cause personal injury as well as damage to your Game Boy. If battery leakage occurs, thoroughly wash the affected skin and clothes. Keep battery acid away from your eyes and mouth. Leaking batteries may make popping sounds.

To avoid battery leakage:

- Do not mix used and new batteries (replace all batteries at the same time).
- Do not mix alkaline and carbon zinc batteries.
- Do not mix different brands of batteries.
- Do not use nickel cadmium batteries.
- Do not leave used batteries in the Game Boy. When the batteries are losing their charge, the power light may become dim, the game sounds may become weak, or the display screen may be blank. When this happens, promptly replace all used batteries with new batteries.
- Do not leave batteries in the Game Boy or accessory for long periods of non-use.
- Do not leave the power switch on after the batteries have lost their charge. When you finish using the Game Boy, always slide the power switch OFF.
- Do not recharge the batteries.
- Do not put the batteries in backwards. Make sure that the positive (+) and negative (-) ends are facing in the correct directions. Insert the negative end first. When removing batteries, remove the positive end first.
- Do not dispose of batteries in a fire.

BLACKJACK

RULES

Blackjack is a game played against the “house,” or the casino. The object of the game is to achieve cards that add up to a number as close to 21 as possible. If you go over 21, you “bust” and are out of the hand. All cards are worth the numbers printed on them. Face cards are worth 10, and the ace is worth either 1 or 11, player’s choice.

At the start of the game, each player is dealt a single card face up. Then each player is dealt another card. The dealer’s first card is face down, but the second is face up. Try to make sure your total is higher than the dealer’s without busting. If your hand is higher than the house’s hand, you win. If it’s a tie, you “push.” If it’s lower, you lose. If either you or the house draws 21 with the first two cards, it’s called Blackjack. If you draw it, you win. If the dealer draws it, everyone loses. If both you and the dealer draw Blackjack, you tie.

PLAYING BLACKJACK

To place a wager, press the **Control Pad Up** to move the highlight onto the table and press the **A Button** to place a chip down. The value of the bet unit is placed each time you press the **A Button**. Once the betting is complete, press the **Control Pad Down** to once again highlight the options and select the "Done" option. The dealer will now deal the cards.

In Blackjack there are initially three options displayed at the bottom of the screen. After the cards are dealt, additional options will become available to you.

Speed Bet

Automatically selects the amount of the last bet you made and prepares you for the deal.

Bet Unit

Displays the Chip Tray that allows you to change your bet at the beginning of any hand. See ***Chip Tray*** on page 9.

Done

Causes the dealer to deal the cards.

Hit

Indicates you want another card. You can continue to Hit until you reach 21 or go bust.

Stand

Indicates you're satisfied with your hand. The dealer will always draw a card if his hand is less than 17. As soon as his hand totals 17 or more, he will Stand. In the event of a "Soft 17" (a hand which includes an Ace and can be counted as either 7 or 17), the dealer will always hit.

Double

While playing you can Double your bet, allowing you to place another Bet Unit. You will only be dealt one more card.

Split

On certain occasions, when your cards are identical (two 8s, for example), you can Split. This requires you to place another Bet Unit on the table and play each card as a separate hand.

Insurance

On occasion, the dealer will show an Ace as the face up card. The dealer will then ask you if you want insurance. This means that you must place an additional bet equal to one half your original bet on the chance the house has Blackjack. If you're right, you get half of your original bet back. If you're wrong, you lose the insurance bet and continue to play normally.

CRAPS

RULES

In Craps, the person rolling the dice is called the "shooter." Before the shooter rolls the first roll, the player bets on whether the shooter will roll a 7 or 11. Betting on the PASS line means that the player believes the shooter will roll 7 or 11. Betting on DON'T PASS means the player doesn't think the shooter will hit those numbers.

PASS and DON'T PASS can only be bet on for the shooter's first roll.

If the shooter doesn't hit 7 or 11, or doesn't roll a 2, 3 or 12 (called "craps"), which are automatic losses for everyone, the number rolled becomes the "point." The shooter keeps rolling until the dice hit the point, 7, 11 or a craps.

The COME and DON'T COME bets are very similar to PASS/DON'T PASS, but they are opposite (a 7 or 11 wins for the COME while craps loses). Any other roll shifts the bet onto that number. If that number is rolled again, the bet wins, a 7 loses and all others allow the bet to remain. You can only bet COME/DON'T COME if the shooter is not on his/her first roll. Once the point is established,

or the COME/DON'T COME bets are placed, you can bet up to double your original bet on the bet's odds of winning. These bets are placed beside the original bets.

Players can also bet that a specific number will appear before a 7 is rolled by betting on the double line below the number. Similarly, you can bet that a 7 will be rolled before that number by betting on the line at the tip of a number's box. The last main bet is the FIELD where one of the listed numbers will be rolled on the next throw. Two and 12 win triple here.

On the right-hand section of the table are the "Proposition" bets--long odds for big payoffs. The four large boxes are betting that a double will be rolled before a 7 or any other version of this number. All other proposition bets are one-offs (bets that the next roll will be a 7, craps, 12, 2, 11, 3 or an 11/craps).

PLAYING CRAPS

To place a wager, press the **Control Pad Up** to move the highlight onto the table and press the **A Button** to place a chip down. The value of the Bet Unit is placed each time you press the **A Button**. Once the betting is complete, press the **Control Pad Down** to once again highlight the options and select "Done." The view will change to reveal the dice automatically being thrown. When the dice have stopped moving, the perspective will return to betting view.

In Craps there are three options displayed at the bottom of the screen:

Clear

Select to clear all bets from the table.

Bet Unit

Select to display the Chip Tray that allows you to change the amount of your Bet Unit. See **Chip Tray** on page 9.

Done

Select to close the betting and cause the dice to be thrown.

ROULETTE

RULES

There are 38 numbers on a roulette wheel: 18 are red, 18 are black and 2 are green. You bet on the number that you believe the ball will drop into on the wheel. The two green numbers, 0 and 00, are automatic house wins. If they come up, you can win only if you have bet on one of those two numbers.

In Roulette there are a variety of bets you can place:

- You can bet on the particular color the ball will land on.
- You can bet on the exact number the ball will land on.
- You can bet on a pair of numbers located next to each other.
- You can bet whether the number the ball will land on will be odd or even.
- You can bet that the number the ball lands on will be between 1 and 12, 13 and 24, or 25 and 36, or even that it will be a number between 1 and 18 or 19 and 36.
- Players can even bet on a column of 3 numbers, placing their bets on the top line, or any of 3 rows of 12 numbers.

PLAYING ROULETTE

To place a wager, press the **Control Pad Up** to move the highlight onto the table and press the **A Button** to place a chip down. The value of the Bet Unit is placed each time you press the **A Button**. Once the betting is complete, press the **Control Pad Down** to once again highlight the options and select "Done." The view will now change to reveal the wheel spinning. When the wheel finally stops spinning, the perspective will return to betting view.

In Roulette there are four options displayed at the bottom of the screen:

Speed Bet

Select to automatically choose the amount of the last bet you made and spin the wheel.

Clear

Select to clear all bets from the table.

Bet Unit

Select to display the Chip Tray that allows your Bet Unit amount. See **Chip Tray** on page 9.

Done

Select to close the betting and start the wheel spinning.

SLOT MACHINES

Golden Nugget® Casino allows you to play two different Slot Machines that share the following controls:

Coin Slot

Press the **A Button** while this is highlighted to drop a coin into the machine. Although you may insert as many coins as desired, the rollers will automatically begin spinning after the third coin.

Spin Button

Select to start the rollers spinning.

Cash Out Button

Select to empty accumulated credits from the machine.

Quit Button

Select to exit the current Slot Machine and return to the Lobby Screen.

Bet One

If you have accumulated credits, press this button to use one of the credits in the machine.

Bet Max

If you have accumulated credits, press this button to automatically bet three coins at once. If you have less than three coins in the machine, all remaining credits will be played.

WILD WEST

The Wild West machine has 3 reels and one pay line. You can also play 1 to 3 coins but the largest jackpot is only available if you play 3 coins. Although unmatched badges pay well, matched badges pay the largest jackpot. If two of the three reels display a badge, but the third reel does not match up, then the unmatched reel will spin again, giving you a second chance at the big jackpot.

HALLOWEEN SPOOKY

The Halloween machine has 3 reels and 3 pay lines. You can play 1 to 3 coins but the largest jackpot is only available if you play 3 coins. The ghost is a wild card symbol that will substitute for any other symbol. If three gravestones land in the correct order spelling out "R.I.P.," you will win 100 coins instead of the regular 40 for any three gravestones.

VIDEO POKER

Golden Nugget® Casino offers you four types of Video Poker. Each machine has slightly different rules regarding the cards that compose a winning hand.

DEUCES WILD

In this game, the rules of standard poker apply except that all Twos in the deck are considered “wild” and can be counted as any card of any suit when determining a winning hand.

JOKERS WILD

This game has the same rules as Deuces Wild except Jokers are wild.

JACKS OR BETTER

In this game, the rules of standard poker apply. However, the computer only counts pairs of Jacks, Queens, Kings and Aces as winning pairs.

TENS OR BETTER

This game is identical to Jacks or Better with one difference: a pair of Tens is also a winning pair.

To play either Video Poker machine, use the following controls:

Coin Slot

Press the **A Button** while this is highlighted to drop a coin into the machine.

Hold Buttons

Press one of these buttons to cause the corresponding card to be “held” in the player’s hand during the card exchange phase. Pressing these buttons while a card is being “held” will release the card, allowing it to be exchanged for another card during the card exchange phase.

Deal Button

Causes the cards to be dealt or exchanged.

Cash Out Button

Empties accumulated credits from the machine.

Quit Button

Exits the current Slot Machine and returns you to the Lobby Screen.

Left Button

View the winning hand combinations.

Bet One

If you have accumulated credits, press this button to use one of the credits in the machine.

Bet Max

If you have accumulated credits, press this button to automatically bet five coins at once. If you have less than five coins in the machine, all remaining credits will be played.

RULES OF VIDEO POKER

In Video Poker, cards are ranked from highest to lowest:

Ace, King, Queen, Jack, Ten, Nine, Eight, Seven, Six, Five, Four, Three, Two

The chart below lists the ranks of hands in Video Poker:

- **Royal Flush:** The five highest ranking cards of the same suit (for example: Ace of Hearts, King of Hearts, Queen of Hearts, Jack of Hearts, 10 of Hearts)
- **Straight Flush:** Any five cards in order of rank, and of the same suit (for example: Three of Clubs, Four of Clubs, Five of Clubs, Six of Clubs, Seven of Clubs)
- **Four of a Kind:** Four cards of the same rank (for example: Ace of Hearts, Ace of Clubs, Ace of Diamonds and Ace of Spades)
- **Full House:** Three cards of the same rank, and a pair with the same rank (for example: Three Jacks and a pair of Fives)

- **Flush:** Any five cards of the same suit, but not in order (for example: Three of Hearts, Six of Hearts, Seven of Hearts, Queen of Hearts and Ace of Hearts)
- **Straight:** Any five cards in order, but not of the same suit (for example: Two of Clubs, Three of Diamonds, Four of Hearts, Five of Spades and Six of Spades)
- **Three of a Kind:** Three cards of the same rank, along with any two other cards (for example: King of Hearts, King of Spades and King of Clubs)
- **Two Pairs:** Two sets of cards of the same rank, along with any other card (for example: Seven of Hearts, Seven of Spades, Queen of Clubs and Queen of Diamonds)
- **One Pair:** Two cards of the same rank, along with any three other cards (for example: Jack of Clubs and Jack of Hearts)
- **No Pair:** A hand with no matching cards. When this happens, the card highest in rank determines the value of the hand (for example: Ace of Hearts, Ten of Diamonds, Nine of Spades, Three of Spades and Two of Clubs. In this case, the Ace of Hearts is highest in rank so the hand is known as “ace high.”)

PLAYING VIDEO POKER

When the machine first appears, you may insert coins by highlighting the Coin Slot and pressing the **A Button**. You may enter up to five coins for a single hand. If you have entered five coins, the cards will automatically be dealt. Otherwise, simply highlight the “Deal” button and press the **A Button**. After you’ve examined your cards carefully, you can decide which cards you wish to keep and which cards you wish to discard. Beneath each of the cards in your original hand is a “Hold” button. By pressing any of these buttons you are choosing to hold that particular card. So if you want to keep two of the cards you’ve been dealt and discard the other three, you simply push the buttons below the cards you’d like to keep (you may keep as many cards as you like from one to five).

If for any reason you wish to change your mind after making your selections, simply press the “Hold” button beneath the corresponding card to release it. When you are completely satisfied with your choice, press the “Deal” button to replace the cards you don’t want to keep. The cards you have elected to hold will remain on the screen and new cards will replace those you have discarded. If you have a winning hand, the credit display will indicate the amount of money you’ve won.
